Cities and towns are vital for the development of economic systems and social organisations. However, cities face tremendous challenges. consequences of globalisation on city management. This book focuses on the complex of issues generated in urban areas, such as the dynamics of metropolitan spaces, and the need to define strategic territory for operational and policy purposes. Some urgent challenges include how to handle spillovers across municipalities and the need to create a new city structure over an existing city to give the suburbs some elements of centrality. It examines the dynamics of governance and how to get stakeholders' participation in the government process.

Over the next 20 years, most low-income countries will, for the first time, become more urban than rural. Understanding demographic trends in the cities of the developing world is critical to those countries - their societies, economies, and environments. The benefits from urbanization cannot be overlooked, but the speed and sheer scale of this transformation presents many challenges. In this uniquely thorough and authoritative volume, 16 of the world's leading scholars on urban population and development have worked together to produce the most comprehensive and detailed analysis of the changes taking place in cities and their implications and impacts. They focus on population dynamics, social and economic differentiation, fertility and reproductive health, mortality and morbidity, labor force, and urban governance. As many national governments decentralize and devolve their functions, the nature of urban management and governance is undergoing fundamental transformation, with programs in poverty alleviation, health, education, and public services increasingly being deposited in the hands of untested municipal and regional governments. *Cities Transformed* identifies a new class of policy maker emerging to take up the growing responsibilities. Drawing from a wide variety of data sources, many of them previously inaccessible, this essential text will become the benchmark for all involved in city-level research, policy, planning, and investment decisions. The National Research

As the field of public administration has been changing due to globalization, government reforms, and increasing governance practices within intergovernmental networks, research and teaching in public administration also adapted itself to these changes. Public policy research and instruction has become transformed and has diffused into other countries with the help of international organizations and other agents of change and transfer. Research in this field is seen as an opportunity for a definitive shift from traditional models of public administration in the sense that policies may be better designed, articulated, and governed through a collaborative approach, while service provision could be enhanced in terms of proximity, representativeness, and innovativeness. depend on them. Collectively, these governments gather, utilize and store large volumes of sensitive information, especially personally identifiable information such as names, addresses, drivers license numbers, credit card numbers, social security numbers and medical information. Such information is valuable to cybercriminals, and obtaining it is often the purpose of cyberattacks. However, recent high-profile cases suggest that local governments are poorly equipped to respond to these attacks. This book seeks to educate and inform top local government officials, department heads and staff, as well as interested residents, of the major issues they encounter as they endeavor to provide high levels of cybersecurity; the cybersecurity challenges these governments face; and how best to meet these challenges.
