Introduction to the Practice of Statistics (IPS) shows students how to produce and interpret data from real-world contexts—doing the same type of data gathering and analysis that working statisticians in all kinds of businesses and institutions do every day. With this phenomenally successful approach originally developed by David Moore and George McCabe, statistics is more than just a collection of techniques and formulas. Pierre Bourdieu has been making a distinguished contribution to European sociology for the past 25 years. He is Professor of Sociology at the Collge de France in Paris and author of many influential books including, most recently, Distinction and Homo Academicus, which have both been translated into English. This book serves to introduce this important body of work to the Anglo-American world. In a cross-disciplinary collaboration Richard Harker, Cheleen Mahar and Chris Wilkes provide the reader with the necessary tools to understand this complex and rewarding body of French sociology. Post modernist sociology has already been influenced by the French theorist Foucault; it is likely that the generation to come will be reading Bourdieu.
