The KTM 690 ENDURO R is equipped with ride-by-wire system, which processes throttle twist grip movements with the help of electronic sensors and activates the throttle valves to control throttle action. This significantly improves the response, giving the rider better throttle control of the potent single-cylinder and a smoother ride.

You said in your presentation that you took some research and knowledge from the KTM 450 SX-F engine. Can you talk a bit more about that? “So the compact valve trains uses a direct controlled and DLC coated rocker arm for the exhaust valves and it is the same concept we have been using on our latest KTM 450 SX-F.
