To get data into a GIS, two procedures are used, selection and representation. Depending on how large an area you are studying, it may be okay to symbolize an entire city as a point. Other times, the entire map could be just one small part of a city. Keep this in mind as you select your data and choose how to display it.

"Making Spatial Decisions Using GIS, level 4 of the Our World GIS Education series, allows students to experience the GIS decision-making process in real-world settings. Designed for an upper-level high school or college curriculum, the five modules in this book invite students to perform sophisticated analyses in a variety of content areas. The projects in this book encourage students to make not only maps but also the type of spatial decisions that confront professionals in all walks of life. The five modules pose decisions that will have students examine location criteria, population patterns, chemical spills, storm-ravaged coastlines, and big-city crime." "Making Spatial Decisions Using GIS presumes prior GIS experience and offers step-by-step instruction along with guidelines for more independent study. This book contains all you need to complete GIS projects, including GIS software, data, and worksheets. Companion DVDs provide a wealth of instructional resources to supplement each book. Teachers new to GIS will benefit from detailed notes and suggestions for presenting the material." "The projects in this book are connected to a variety of subject areas, such as business, government, and public administration. By completing the projects, students improve their skills in critical thinking, communication, technology, and problem-solving as delineated by the Partnership for 21st Century Skills."--BOOK JACKET.

The Encyclopedia of GIS provides a comprehensive and authoritative guide, contributed by experts and peer-reviewed for accuracy, and alphabetically arranged for convenient access. The entries explain key software and processes used by geographers and computational scientists. Major overviews are provided for nearly 200 topics: Geoinformatics, Spatial Cognition, and Location-Based Services and more. Shorter entries define specific terms and concepts. The reference will be published as a print volume with abundant black and white art, and simultaneously as an XML online reference with hyperlinked citations, cross-references, four-color art, links to web-based maps, and other interactive features.
