*Move Data between Apache Hadoop and Oracle Database with ...*

If a name used in a SQL command could be either a column name of a table or a reference to a variable of the function, PL/SQL treats it as a column name. This corresponds to PL/pgSQL 's `plpgsql.variable_conflict = use_column` behavior, which is not the default, as explained in Section 42.10.1. It's often best to avoid such ambiguities in the first place, but if you have to port a large amount of ...

## *42.12. Porting from Oracle PL/SQL - PostgreSQL Documentation*

SQL of 'select \* from emp where 1=1', you can avoid that logic and just add each user supplied where condition, and tack a 'and ' in front of it, and it will work. And the '1=1' will not have any effect on the data selected, it's sole purpose in life is to make it simpler to tack on dynamic where conditions.
