Prestressed Concrete Vs
Reinforced Cement
Concrete ...

Prestressed concrete is a form of concrete used in construction. It is substantially "prestressed" during production, in a manner that strengthens it against tensile forces which will exist when in service.¶5 This

reasons: Use of high strength concrete results in smaller sections.

High strength concrete offers high resistance in tension, shear, bond and bearing. Less loss of prestress occurs with high strength concrete.

beams are small.

Concrete

Difference Between
RCC and Prestressed

Concrete ...

Prestressing applies an initial compressive axial force to the concrete which greatly reduces or eliminates the internal tensile stresses. It does this by a tensile stress to steel cable running through the concrete.

Read Online

Psc Uk

The steel cable is then anchored and a compressive force is transferred to the concrete by bond forces as shown in figure.
