For many Americans who grew up in a small town, childhood and adolescence revolved around the skatepark. As time passes, however, these people drift away from skateboarding and the spaces where they learned to do it. Part memoir, part travelogue, part essay, *Small Town Skateparks* is the story of an adventure to discover the role skateparks play in such lives and the role they played in the author's own. Clint Carrick grew up at the skatepark. Every day of the summer, he and his friends would loaf at the dilapidated park with warped plywood ramps strewn with rusty nails. They were the outsiders of the town, or at least thought of themselves that way. They wore jeans and ripped skate shoes and felt free in their special hang out, the skatepark, where they had their own language, their own heroes, and their own views of the world. In this setting they matured from children awestruck of high school kids to bored young men desperate to get out. Clint, now an adult, rekindles these forgotten memories as he drives across the country visiting unremarkable skateparks in America's small towns. Why is he drawn to these skateparks? What is their charm? How does the skatepark function as an institution, and what is the indelible mark it leaves on those who grow in its womb? As he makes his way further west, Clint relearns how to skate. He chats with locals, crashes, bleeds, and hears a lot of stories that sound like his own. The rust begins to wear off, but questions remain. Can someone who left skating behind rediscover the activity that defined his youth? Can someone who abandoned skateboarding make the skatepark once again his home?

Southern California is the birthplace of skateboard culture and, even though skateparks may be found worldwide today, it is where these parks continue to flourish as architects, engineers and skateboarders collaborate to refine their designs. The artist Amir Zaki grew up skateboarding, so he has an understanding of these spaces and, as someone who has spent years photographing the built and natural landscape of California, he has a deep appreciation of the large concrete structures not only as sculptural forms, but also as significant features of the contemporary landscape, belonging to a tradition of architecture and public art. To capture the images in this book, Zaki photographed in the early-morning light, climbing inside the bowls and pipes while there were no skaters around. Each photograph is a composite of dozens of shots taken with a digital camera mounted on a motorized tripod head. The resulting images are incredibly high resolution and can be printed at a large scale with no loss of detail. Their look is unusual in that Zaki's lens is somewhat telephoto, which has the effect of flattening space, yet the angle of view is often quite wide, which exaggerates spatial depth. The technology also allows Zaki to photograph certain areas from difficult positions that would otherwise be impossible to capture. Zaki makes the point that, by climbing deep inside these spaces, the visual experience is fundamentally different from viewing them from outside. In his text, Tony Hawk - one of world's best-known professional skateboarders - describes how Zaki's photographs of empty skateparks and open skies evoke memories of the idyllic freedom and the sense of potential that he felt when he first visited a skatepark as a child and saw skaters flying like birds in and out of the concrete pools and bowls. Hawk has skated in some of the parks featured in this book, and for him several of Zaki's images, taken from the skater's perspective, recall the experience of trying to learn a particular trick. A beautiful full pipe that looks like a barrelling wave may be, for Hawk and other seasoned skateboarders, a perfect example of function and form fitting together flawlessly in a well-designed skatepark. In his essay, the Los Angeles-based architect Peter Zellner offers a different perspective. Skateparks are made by excavating large open areas of land within city parks. The forms inside them may represent ocean waves, mountainous terrain and other features from nature, but they are permanently frozen in cement like Brutalist architecture. Every shape, line, transition, hip, tombstone, coping, stair, flow, tile, bowl, pipe, spine, rail, ledge, roll-in, kidney, clover, square and bank serves a specific purpose - to provide a challenging thrill and maximum pleasure for the rider. In this sense, skateparks epitomize function over form. In Zaki's mesmerizing photographs, however, these concrete landscapes suggest a more complex and integrated relationship with the history of design and architecture in Southern California.

This book profiles some of the most innovative and creative skateparks in the world. It details their design, construction, and history, including who skated there and the contests held there.

Once considered a kind of delinquent activity, skateboarding is on track to join soccer, baseball, and basketball as an approved way for American children to pass the after-school hours. With family skateboarding in the San Francisco Bay Area as its focus, *Moving Boarders* explores this switch in stance, integrating first-person interviews and direct observations to provide a rich portrait of youth skateboarders, their parents, and the social and market forces that drive them toward the skate park. This excellent treatise on the contemporary youth sports scene examines how modern families embrace skateboarding and the role commerce plays in this unexpected new parent culture, and highlights how private corporations, community leaders, parks and recreation departments, and nonprofits like the Tony Hawk Foundation have united to energize skate parks—like soccer fields before them—as platforms for community engagement and the creation of social and economic capital.

One crazy year on the California coast--in 1975 a hippie skunkworks, bred in garages and shacks, launched the modern skater movement. Strap in for a wild ride replete with two car chases, two plane crashes, a massive truck bomb, Colombian narcos, the Mafia, senior White House staff, a gypsy fortuneteller, three straight-up miracles, Jacques Cousteau, big piles of cocaine and naked hippie chicks.
